

Alcinéo's full set of trusted solutions

La Ciotat, November 17, 2016

Alcinéo, a leading provider of embedded payment software, has enhanced a complete suite of trusted and secure solutions around one core of payment, hence optimizing data security and device management. From contact and contactless kernels, to PCI and TMS solutions, our product portfolio is a fast track towards best-in-class data security at POS systems.

Each of our products has been developed in accordance with the latest version of specifications released by EMVCo, and are constantly updated, to deliver to our customers the most up-to-date software, ready for approval.

Our Level 1 and level 2 EMV contact kernels are portable and compact libraries, ready to be implemented on any platform, running with many OS.

Alcinéo also offers contactless kernels, compliant with the standards required by the major payment schemes ; PayWave, MCL (PayPass), ExpressPay, DPAS, JCB, CUP. Furthermore, as we remain close to our customers from around the world, our team continuously works to develop kernels compliant with national payment network standards, such as RuPay, on the Indian market, or Girocard, in Germany.

Additionally, as security is a constant challenge in today's connected world, we have developed a PCI software package, compliant with PCI PTS POI requirements. In addition to the modular and customisable package that we provide, we support our clients from the development phase, up to evaluation.

Moreover, to complete our advanced offer, our Terminal Management System solution is a bespoke tool to control terminal fleet, conduct application updates and drive terminal configuration on any device deployed in the field.

Our extensive range of products are adapted to all smartcard acceptance environments : traditional POS, mobile POS, transit fare systems, gas station dispensers, ATM, kiosks. Our vision of business is not only to provide the most innovative products, but also to share our knowledge and expertise, and support our customers along their project development, throughout certification process, and even after deployment.

Visit us at Trustech the largest event dedicated to Trust-based Technologies : payment, Identification, Connections & Security. Come and meet us on booth C 010, Lérins level, and share our vision of payment.

About Alcinéo:

Alcinéo is a French software company specialized in the development of embedded solutions implementing smartcard technologies and security. It provides leading-edge solutions that meet EMV Chip & PIN requirements, and its payment kernels cover the main payment brand specificities. Alcinéo helps smart card reader manufacturers face multiple challenges in producing next-generation devices, enabling them to shorten their time to market while delivering state-of-the-art technology.
